

A black and white photograph of various botanical specimens, likely from a rose plant, arranged on a light background. The specimens include: a large, dark, serrated leaf on the left; a cluster of three leaves and a flower bud at the top left; a single leaf with three leaflets in the center; a single leaf with five leaflets on the right; a long, straight stem with small thorns in the middle; a long, thick, spiny stem below it; and a flower bud on a stem with leaves at the bottom right. The image is high-contrast, with the specimens appearing as dark shapes against a light background.
